CHOICE HARDY PERENNIAL PLANTS

“HARDY PERENNIALS” are the plants used in the flower garden which do not die at the end of the summer but come up each spring from the same root over a period of years. In some cases, as with some of the Gentians, they are as long lived as shrubs or trees: in other cases they must be divided every two or three years and new plants grown from the old roots. The majority of perennials have a lifetime between these two extremes, but it is wisest to divide most of them after their third year as the new plants resulting will bloom more vigorously than the old clumps.

My plants are grown out of doors and they remain out doors all winter so there is no question as to their hardiness. They should be planted in the spring just as early as the ground can be prepared for them. Late frosts will not harm them in the slightest degree.

All my plants are grown from the best strains obtainable from European and American plantsmen, and are unsurpassed in quality.

All plants sent out are of blooming size; the majority are large clumps.

The rock garden plants (marked R) are, in most cases, from pots.

SHIPMENT

Unless directed otherwise, plants will ordinarily be sent by express, the customer paying the carriage charges. If desired by parcel post, ten per cent should be added to the remittance. Any balance will be refunded.

TERMS

This price list cancels all previous quotations.

New customers will kindly send remittance with order. If credit is desired, please send references and allow me time to hear from them.

Not less than six plants of one variety are sold at the dozen rate; not less than fifty plants of one variety are sold at the 100 rate.

Early Orders

With all orders received before the 15th of March, ACCOMPANIED BY CASH, five per cent of the catalog price may be deducted from the remittance.

The plants will be forwarded at any time you direct, or, if no instructions are given, when the planting season opens.

SPECIALTIES

CAMPANULA TELHAM BEAUTY

About twenty years ago Mr. F. D. Thurston, head gardener at Telham Court, an English estate at Battle in the County of Sussex, raised a plant of *Campanula persicifolia* which was notably beautiful. It bore very large, open, shallow, cup shaped flowers, lilac mauve in color, and was a great advance on

The Horticultural Society of New York

To *Green Brook Gardens*
for *Campanula persicifolia "Telham Beauty"*
exhibited *Monthly Meeting, June 17, 1931.*

Richard L. H. S.
Secretary

J. A. S. H.
President

any existing form of *C. persicifolia*. Mr. Thurston named his plant Telham Beauty. It was exhibited at the Holland House show in London in 1916, and by a unanimous vote of the Floral Committee (an unusual distinction) gained an Award of Merit.

Curiously enough a similar plant had been pictured in the Botanical Magazine for 1805 under the name of *Campanula Persicifolia*, var. *maxima*, which was said to have come from South Carolina in 1791. It passed out of cultivation and no further record of it is known.

The remarkable reappearance of this plant after the lapse of more than a hundred years aroused the interest of the scientific world, and the Journal of Genetics, Vol. XVI 1926, published a long and learned discussion of the phenomenon.

Plants of Telham Beauty were brought to the United States in 1919, but it is still very scarce here. The plants I offer are grown from divisions of the true stock, which of course is the only way that can be depended upon to reproduce the true Telham Beauty.

\$7.50 a dozen. \$60.00 for 100.

ANCHUSA MYOSOTIDIFLORA

(Siberian Bugloss)

A lovely plant for either the border or the rock garden. Very early in spring, as soon as the foliage starts to grow, sprays of true forget-me-not flowers appear and last for almost six weeks. The leaves are heart shaped, very large and a beautiful dark green. Growing to a height of about fifteen inches they spread into a splendid clump that remains in good condition and an ornament to the garden all summer. The clumps should not be disturbed for several years as they grow in beauty yearly. Increased by division after flowering.

Try planting this with clumps of *Doronicum Clusii*. Both bloom at the same time, and both like rich, moist ground and shade.

\$3.50 a dozen. \$25.00 for 100.

ASPHODELINE LUTEA

(Jacob's Rod)

An ornamental, even spectacular, plant (sometimes called the poor man's *Eremurus*) which is not used as often as it might be. In both foliage and flower it is "different." From the clumps of narrow, smooth gray leaves rise thick, heavy flower stalks to a height of four or five feet, which are covered with star-shaped yellow flowers in June. When the flowers wither they leave interesting, large, round green seed pods.

It should be planted in sun, in a rich, deep soil. Propagated by division in spring or early autumn.

\$3.50 a dozen. \$25.00 for 100.

CAMPANULA PERSICIFOLIA

(Peach-leaved Bellflower)

This great border plant is too seldom seen in all the beauty of which it is capable. The delicate texture and clear, pure color of the flowers are seldom equalled in the garden, and it is particularly desirable for cutting as every bud will open out in water.

These campanulas do well in a partly shaded situation, and in a rich, rather heavy moist soil, with plenty of lime. They need frequent division, or else the many growths sent up will exhaust them. The best covering in winter is a two-inch layer of peat moss. Under this blanket the plants will be perfectly hardy and the foliage will stay fresh and green all winter.

DOUBLE-FLOWERED CAMPANULA PERSICIFOLIA

A very handsome strain of *Campanula* bearing flowers that are fully doubled. The color is intensified by the doubling of the petals and the tall stalks appear to be covered with deep lavender roses. At a distance the color is much stronger than the single flowered form, and the plant is more imposing in every way.

My plants are grown from divisions so that every one will be true.

\$5.00 a dozen. \$35.00 for 100.

SINGLE FLOWERED CAMPANULA PERSICIFOLIA

The large, open bells are borne on strong stalks, rising from three to five feet high, and bloom in June and July. There are two colors, lavender blue and a lovely clear white.

Blue \$3.50 a dozen. \$25.00 for 100.

White \$3.50 a dozen. \$25.00 for 100.

CHRYSANTHEMUM (ACHILLEAFOLIUM)

A newcomer from Siberia and the Caucasus which promises to be a welcome addition to our rock gardens. It is a creeper which will cover the rocks with a veil of delicate, very velvety light green foliage. In May it bears heads of yellow flowers similar to *Achillea tomentosa*.

\$3.00 a dozen. \$20.00 for 100.

DIGITALIS

(Foxglove)

Although the foxgloves are treated as biennials, no one would dream of planting a perennial border without including them, for their stately spikes are an important part of the great burst of bloom that comes in June. They should be planted as early in spring as possible so that they may become established before blooming time, and should be given a deep soil with plenty of humus, and a partly shaded situation. The plants I offer are large clumps and grown from strains of unusual beauty.

LUTZ HYBRIDS. Tall spikes of pink flowers, ranging from flesh color to rose.

SUTTON'S GIANT PRIMROSE. Very large flowers of deep cream.

Both foxgloves; \$3.00 a dozen. \$20.00 for 100.

DORONICUM CLUSII

(Leopard's Bane)

One of the very earliest flowers to bloom in the spring, sending up its large, golden daisies with the first warm days. The shining bright green foliage is equally pretty and stays in good condition all summer. It needs a shady place and plenty of moisture and division every other year.

\$3.50 a dozen. \$25.00 for 100.

GENTIANA ASCLEPIADEA

(The Willow Gentian)

This gentian is a native of the Caucasus and has been grown in European gardens for some time, but is little known in the United States. It is said to be one of the most beautiful of the family. In young plants the stems are drooping, but as the plants grow older the stems become erect and grow from eighteen to thirty inches high. In August and September the stems are covered with the large, deep blue trumpets which are borne in the axils of the leaves.

The plants take a long time to become established but thereafter are very long lived. I have been told of a plant in a garden near New York that has been growing for more than twenty years. For this reason pains should be taken to prepare the soil to a great depth. Rich, moist loam with plenty of limestone chips and leaf mold, and a very shady situation, seem to meet its requirements. Plenty of moisture is essential. Plants cannot be moved after they are put in the ground, as the roots must not be disturbed. They are established in pots before they are sent out.

Three year plants \$7.50 a dozen.

Two year plants 5.00 a dozen.

NEW HOLLYHOCKS

IMPERATOR. A hollyhock which has set a new standard of magnificence in these popular flowers. The individual flowers are very large, five to six inches across, with a double row of fringed and frilled outer petals and in the centre a very double rosette about two inches across. The colors are very beautiful, for the most part being combinations of delicate rose and pink, and cream and yellow. The flowers are borne on tall stalks, and the whole plant is one of majestic beauty.

\$3.50 a dozen. \$25.00 for 100.

QUEEN OF SHEBA. Very large and very double flowers, buff colored with rosy reflection.

\$3.00 a dozen. \$20.00 for 100.

INCARVILLEA DELAVAYI

(Hardy Gloxinia)

A plant of quite spectacular beauty after it has been established for two or three years. The ornamental leaves, eighteen inches in length, form large clumps close to the ground, and from the centre the flower stalks rise to a height of three feet, bearing large rose colored trumpets in July.

The plants need light, rich soil which has been prepared to a depth of two feet. The roots should be planted with the crowns two inches below the surface, and in winter should be covered with several inches of peat moss or leaves, or coal ashes.

\$5.00 a dozen. \$35.00 for 100.

LINUM NARBONNENSE

(The blue flax of Narbonne)

Similar to, but a far more desirable variety for the rock garden especially, than the familiar *Linum perenne*. The same lovely clouds of sky blue, but with *Linum perenne* this beauty vanishes every day at noon, while with *L. Narbonnense* the flowers remain open all day. They are also larger and a deeper blue.

\$3.50 a dozen. \$25.00 for 100.

MYOSOTIS ALPESTRIS

(Forgetmenot)

SUTTON'S ROYAL BLUE. Everybody knows and everybody loves the Forgetmenot, and indeed there is nothing that will quite take the place of its entrancing blue in the early spring. This is a very fine variety with deep sky blue flowers.

\$2.50 a dozen. \$18.00 for 100.

PENTSTEMON BARBATUS. NEW HYBRIDS.

Bushy plants, growing four feet high, with narrow leaves which persist all winter and make a cheerful mass of bright green in the dull days of the cold months. They have a long blooming season, and from the end of June through August the stems are covered with bright rose colored trumpets which are much larger than the flowers of the familiar tall Beardtongue, and much more closely placed on the stem. Like all the *Pentstemon* family they are easily

grown and are not particular as to soil, and should be divided every year. They are very hardy and need no protection in winter.

\$3.50 a dozen. \$25.00 for 100.

GIANT YELLOW POLYANTHUS

(Bunch primrose)

One of the most lovely and desirable of spring blooming plants, and probably the easiest to grow of all the hardy primroses. The lush green leaves push up with the first warm days, and in May the charming yellow flowers, so typical of spring time, cover the plants.

They love moisture and heavy rich ground and they must be shaded through the heat of summer. They are perfectly hardy if not exposed to cutting winds and need only the protection of a little straw over them in winter. When the clumps become too large they should be divided and replanted immediately after flowering. They are lovely planted with forgetmenots.

\$5.00 a dozen. \$35.00 for 100.

PRIMULA FARINOSA

(Bird's eye primrose)

There is nothing lovelier in the garden than the rosettes of pure silver that mark the appearance of this primrose very early in spring, and which are soon followed by the dainty lavender flowers. It is a choice little plant, worthy of the care that it will take to keep it happy. A cool position in the rock garden is the best place for it and it must never be allowed to suffer for lack of moisture.

\$5.00 a dozen. \$35.00 for 100.

TROLLIUS

(Globe Flower)

All the Globe flowers have handsome, dark green foliage and shining gold flowers. They will grow in either sun or shade but they need plenty of water and a heavy, rich soil. They are not at their best for two or three years until they have grown into large clumps when they are very beautiful ornaments to the shady side of the garden. The flowers are borne in graceful sprays and are exceptionally good for cutting as they are long lasting.

GOLDQUELLE HYBRIDS. A fine early blooming variety bearing quantities of large globe shaped, golden yellow flowers in early spring, and again during the autumn.

\$6.00 a dozen. \$40.00 for 100.

T. LEDEBOURI. The flowers are rich orange in color, and are open instead of globe shaped, and bloom in June. The plants grow three to four feet high. A very fine variety.

\$5.00 a dozen. \$35.00 for 100.

T. LEDEBOURI "GOLDEN QUEEN." NEW. A wonderful advance on the preceding. The plants are taller and larger in every way. The flowers are yellow gold with triple rows of petals instead of a single row.

\$7.50 a dozen. \$50.00 for 100.

VIOLA SEATTLE GEM. NEW.

This viola is said to be a sport of Jersey Gem and has the same good qualities as its parent. It is an even more vigorous bloomer and withstands our hot summers just as well. The color, however, is entirely different, being a very delicate lemon yellow, fading to almost white, with a center of bright yellow. The petals are slightly ruffled and the flowers are borne on long stems.

\$3.50 a dozen. \$25.00 for 100.

VIOLA ODORATA "ROSINA"

This lovely little violet of American introduction is becoming more and more popular as it becomes better known. It is a true hardy violet with single flowers, soft pink in color, and possessed of the most delicious perfume of which a violet is capable.

"Rosina" blooms outdoors in early spring for a short time before the warm weather but its long blooming season is in the autumn. Beginning the first of September the blossoms appear continually all the fall, the flowers becoming larger, with longer stems, and the color deeper, as the weather becomes cooler. Nothing but very heavy frost stops them, and if the plants are kept in a frame, flowers can be picked all winter.

"Rosina" is a strong grower and should be divided at least every other year. It blooms best in full sun but will stand some shade in summer. Its chief requirements are rich soil and plenty of moisture. It is very hardy and in winter needs only the usual protection of straw or peat moss.

\$3.50 a dozen. \$25.00 for 100.

IRISES

TALL, BEARDED IRIS

WHITE

TAJ MAHAL , 82-81 (Sturt. 1921), 36 inches. A lovely pure, smooth white. Fine form, rugged constitution and free flowering.....	Dozen \$ 3.00
---	------------------

YELLOW

AMBER , 88-88 (Dykes, 1924), 36 inches. One of the finest yellows yet introduced. Award of Merit from R. H. S. of England.....	4.00
SHEKINAH , 84-84 (Sturt.) Clear, soft yellow with a little deeper tone at the throat and a handsome golden beard.....	3.00

BLUE AND LAVENDER TONES

CONQUISTADOR , 89-83 (Mohr, 1923) 40 inches. A gigantic medium blue self of perfect form	4.00
JACQUELINE GUILLOTT , 82-83 (Cay. 1924), 36 inches. Enormous bloom on finely branching stems. Pale silvery blue with a lustrous surface. Certificate of merit by the French National Horticultural Society.....	5.00

LORD OF JUNE , 88-78 (Yeld, 1911), 40 inches. A huge, stately flower. Soft, silvery blue. Delightfully scented. It has probably won more ribbons at flower shows than any other iris, and will for many years to come..	3.00
MOTHER OF PEARL , 84-84 (Sturt. 1917), 44 inches. Large, perfectly shaped flower, pale blue with iridescent Mother of Pearl coloring.....	3.00
SOUVENIR DE LOETITIA MICHAUD , 92-90 (Millet, 1923), 48 inches. Flowers of huge size and fine texture. An exquisite soft blue. Perfection in color, form, substance and fragrance as witnessed by the very high rating	10.00

PINK TONES

APHRODITE , 81-88 (Dykes, 1922), 44 inches. Soft violet pink with white flush at the throat. Vigorous grower	5.00
DREAM , 84-84 (Sturt. 1918), 38 inches. Soft, clear, uniform pink tone. Delightfully pretty and very popular	3.00
SUSAN BLISS , 85-86 (Bliss, 1922), 40 inches. Exquisite, lavender pink flowers. Profuse bloomer. The best of the low priced pinks.....	3.00
FRIEDA MOHR , 89-85 (Mohr, 1926), 42 inches. One of the largest irises in cultivation, with pale lilac pink standards and deep lilac rose falls. Outstanding among recent introductions	12.50

RED TONES

OPERA , 82-83 (Vilm. 1916), 24 inches. A glorious, rich velvety, violet red. Very popular	3.00
SEMINOLE , 83-83 (Farr, 1920), 30 inches. Rich, velvety crimson, not quite as bright in color as Opera but taller.....	3.00

PEONIES

The single and Japanese peonies are becoming increasingly popular as their beauty becomes more appreciated. They are lovely in the garden and unrivalled as cut flowers. The singles have one or more rows of petals with a center of stamens: in the Japanese type five or more rounded guard petals surround a large center of petaloids.

SINGLE PEONIES

L'ETINCELANTE (Dessert, 1905). Soft, velvety carmine with a silvery margin. A splendid flower	Each \$1.00
MADELEINE GAUTHIER (Dessert, 1908). Flesh color of waxy texture: large flower of perfect shape	3.00
MARGUERITE DESSERT (Dessert, 1913). Very large flowers, thickly powdered with pale, rose-pink dots. Free flowering. Strong grower.....	2.50
ROSY DAWN (Barr). Immense flowers. At opening tinted pink; fading to pure white. Strong, upright grower; free bloomer	1.50

JAPANESE PEONIES

GEISHA Clear, bright red; two rows of petals. Tall stems; late	\$8.00
MIKADO Uniform shade of brilliant crimson; petaloids of chamois-yellow, faced crimson; typical oriental coloring. The first Japanese peony to be introduced in this country and probably the best known.....	1.50
SHIRO SANGAI A choice white. Eight inch flowers are normal, produced very freely	2.00
SURUGU Pure red. Very beautiful, cup shaped flower.....	5.00
TOKIO Extra large clear pink. Strong grower.....	3.00
YOOCHO-NO-TSUKI (Shadow of moon in a rippled pool) Flowers white, occasionally flushed pink, with amber petaloids.....	2.75

LECTURES

I am prepared to give practical talks to Garden Clubs on the following subjects:

“Growing perennials from seed”

“The perennial garden in spring”

“The perennial garden in summer”

“The perennial garden in autumn”

Terms: \$20 for each lecture, and traveling expenses.
